

Suture subtract.

Based upon the suture procedure, these forms are the results of a small clay model that is distanced through a series of indexical procedures, the outcome of which is this concave/corporeal trace - from which parts are subtracted.

*: clay model in the blind - mould - wax - mould - bronze cast - slide photography - triangulation - sintering - optical scan - digital modelling - sintering - partial surface imprint on clay - clay imprints assembled - intermediate cavity covered - parts removed - balanced in space or left resting.*

Concluding the distancing procedure, parts are subtracted from the assemblage of surfaces and finally what is left, is either balanced in the vertical horizontal grid of gravity, or laid resting on a horizontal plane.
